

IN THE CLAIMS

1-31. (canceled)

32. (currently amended) A housing for a pump mechanism of a breastpump comprising:

a two-piece housing, said two-piece housing consisting of a first housing half connected to a second housing half; first and second housing parts which assemble to provide an interior space for containing pump mechanism components;

a first flexible diaphragm formed integral with said first housing half part and a second flexible diaphragm formed integral with said second housing half, part; said first housing half and said housing half defining a single interior space with said first and second diaphragm, said single interior space for containing pump mechanism components; and

a noise and vibration reducing material formed integral with said housing parts adjacent said interior space.

33. (canceled)

34. (currently amended) A housing for a pump mechanism of a breastpump comprising:

a two-piece housing consisting of first and second housing parts which assemble to provide an a single interior space adapted to contain pump mechanism components, said pump mechanism components including an electric motor, an eccentric and a pair of pullers, and flexible diaphragms including a first flexible diaphragm connected to a first of said pair of pullers and formed integral with said first housing part and a second flexible diaphragm connected to a second of said pair of pullers and formed integral with said second housing part.

35. (previously presented) The housing of claim 34 wherein each of said flexible diaphragms is fixed within an opening defined in a respective housing part, and further including a rigid hemispherical cap member which is removable and sealingly mountable over said opening on the outboard side of each housing part, said cap member and respective diaphragm together forming an expansible chamber for generating air pressure variations therein.

36. (original) The housing of claim 35 further including a noise and vibration reducing material formed integral with said housing parts adjacent said interior space.

37-39 (canceled)
